26. (New) A method for controlling at least one condition at least partially caused by the level of sebum production selected from the group consisting of blemished skin, acne, seborrheic phenomena, greasy hair, said method comprising topically applying to an affected area of skin and/or hair an effective amount of a composition comprising one or more cyclodextrins.

27. (New) The method of claim 24 wherein the one or more cyclodextrins are selected from the group consisting of α -cyclodextrin, β -cyclodextrin, γ -cyclodextrin and δ -cyclodextrin, and wherein the cyclodextrin component comprises at least 30 wt.-% of γ -cyclodextrin.

28. (New) The method of claim 24 wherein the one or more cyclodextrins comprise 0.0005 wt.-% to 50% wt.-% based on the total weight of the composition.

29. (New) The method of claim 28 wherein the one or more cyclodextrins comprises 0.02 wt.-% to 10% wt.-% based on the total weight of the composition.

30. (New) A method for removing sebum, said method comprising topically applying to skin and/or hair an effective amount thereof of a composition comprising:

an oil phase, and

a cyclodextrin component, wherein said component comprises one or more cyclodextrins.

31. (New) The method of claim 30, wherein the composition is in a form selected from the group consisting of a gel, solid stick, lotion, cream, suspension and emulsion.
